DETAILED ACTION

1. This action is responsive to communication: Application, filed on 10/10/03.

Allowable Subject Matter

2. Claims 3-10, 13-20, and 23-30 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims and overcoming the current double patenting rejection.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to teach and/or suggest "enabling an authorized authoring member to create data comprising a draft information object, which uniquely identifies a product . . . a corresponding immutable informational object which is identified by a unique identifier . . . writing said created immutable information object into a memory . . .", combined with "updating an information object by creating a new informational object relating back to said informational object . . .".

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir.

Art Unit: 2163

1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-2 and 4-30 are rejected on the ground of nonstatutory double patenting over claims 1-30 of U. S. Patent No. 6671696 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: a common point authoring system for enabling authorized members to create data comprising a draft informational object and converting the informational object created by the authorized member to a corresponding immutable informational object identified by a unique identifier.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Claim Rejections - 35 USC § 102

Art Unit: 2163

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-2, 11-12, and 21-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Leon, US# 6,438,560 B1.

As per claims 1 and 11, Leon teaches “means for enabling an authorized authoring member to create data comprising a draft informational object, which uniquely identifies a product for tracking purposes” (see col. 11, lines 43-67) “means for authenticating said draft informational object created by said authorized authoring member” (see col. 3, lines 60-68, whereas Loen’s network/workstation elements, which request a password and login data to access the network, includes an authentication element as illustrated in applicant claim language) “means for converting said authenticated informational object created by said authorized authoring member to a corresponding immutable informational object which is identified by a unique identifier” (see col. 3, lines 7-29 and col. 6, lines 50-67) “means for writing said created immutable informational object into a memory for use by authorized accessing members” (see col. 4, lines 33-38 and col. 6, lines 43-67).

As per claims 2 and 12, these claims are rejected on ground corresponding to the arguments given above for rejected claims 1 and 11 and are similarly rejected.

Art Unit: 2163

As per claims 21-22, these claims are rejected on grounds corresponding to the arguments given above for rejected claims 2 and 12 and are similarly rejected including the following:

--Leon et al. teaches "database management means . . ." (see col. 3, lines 6-20 and see col. 7, lines 5-18).
